

Food Safety for Value-Added Maple Syrup Products in Wisconsin

Dr. Barbara Ingham, Food Safety Specialist, University of Wisconsin–Madison Division of Extension <u>bhingham@wisc.edu</u> • 608-263-7383

What food or beverage do I want to manufacture and sell?

- What agricultural products do you grow or have access to? For example: Tomatoes
- What are the value-added products you could make from each of these agricultural products? For example: Salsa
- What are some of the benefits of making value-added products?

For example: I might be able to sell jars of salsa for more than I sell fresh tomatoes.

What are some of the risks of making value-added products?

For example: Making and canning salsa increases possible food safety risks. Making and canning salsa will increase my labor hours.

What are the steps to manufacturing a safe product?

- In order to start making your value-added product, what food safety considerations can you think of? For example: Operating in sterile conditions at every step
- What are the licenses and registrations you need to produce this value-added product in Wisconsin? For example: Food processing plant license
- At what temperature will your product be stored and sold? For example: Shelf-stable, refrigerated, or frozen (know your exact temperatures)
- Who can help you learn about food safety in processing your product?
 For example: DATCP Licensing Specialists: 608-224-4923 or datcpdfslicensing@wi.gov
- What is your recipe? And which recipe considerations affect the food safety of your product? For example: pH, temperature, ingredients, cook time
